Quest Rubric No: 2	**1**		
Objective criteria (0/1, 1=met)	**Rating**	**Max**	**Comments**
Converts raw ADC values into correct engineering units for sonar, lidar	1	1	
Generates real-time plot(s) on host machine from live sensor and localization	1	1	You can plot comparison between before and after sensor fusion
Quantifies noise/error using double integration from accelerometer (using ground truth)	1	1	
Implements a basic sensor fusion strategy (only one additional sensor is sufficient) to improve localization estimate	0	1	No sensor fusion, only show each sensor data separatedly
Exploring the role of at least 2 filtering mechanisms (e.g., one temporal, one threshold based)	1	1	
Compare with a smartphone accelerometer-based positioning (offline, just report the quality with double integrating smartphone	1	1	You should provide better comparison instead of putting raw data
Investigative question response	1	1	
Bonus: Make positioning orientation invariant	1	1	
Total objective criteria	**7**	**7**	
Qualitative criteria	**Rating**	**Max**	
Quality of solution	5	5	
Quality of report.md including use of graphics	3	3	
Quality of code reporting	2	3	Thank you for providing sample data, but same comment as question 1, don't forget the code readme.
Quality of video presentation	3	3	In demo video, you should demonstrate each objective because for this quest, I grade it based on code you provided and data you provided which I can't find the part of those objectives above.
Total qualitative criteria	**13**	**14**	
Quant Weight (75)	75	75	
Qual Weight (25)	23.2	25	
Total Score	**98.2**	100	
Rank (1-5)		5
